Types of Wad-Seal Liners

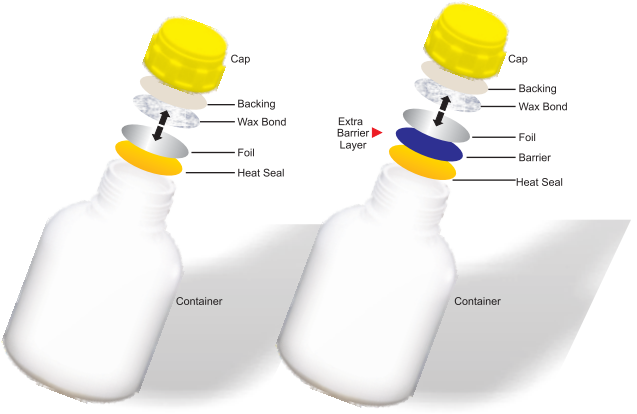

One Piece Wad-Seal

The Wad-Seal is fitted into the cap. The container is screwed with a wadded-cap. The capped-container is passed under the Induction Heat Sealer. This seals the entire liner to the mouth of the container.

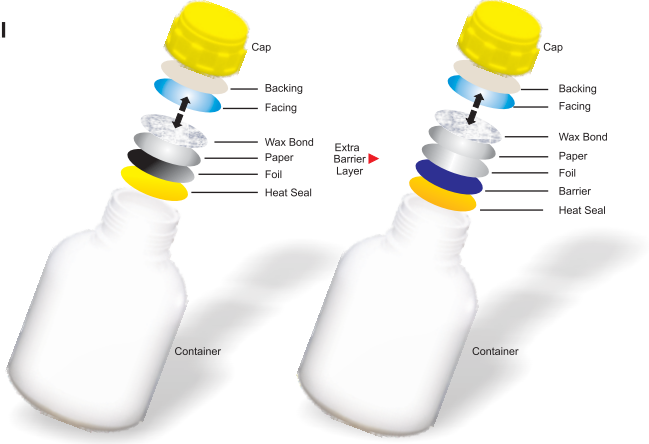

Two Piece Wad-Seal

The Wad-Seal is fitted into the cap. The container is screwed with a wadded-cap. The capped-container is passed under the Induction Heat Sealer. The sealant material bonds to the mouth, simultaneously the wax melts and gets absorbs in the backing material. Wax being the bonding layer splits the seal. Backing material remains permanently in the cap.

Two Piece High-Barrier Wad-Seal

The Wad-Seal is fitted into the cap. The container is screwed with a wadded-cap. The capped-container is passed under the Induction Heat Sealer. The sealant material bonds to the mouth, simultaneously the wax melts and gets absorbs in the backing material. Wax being the bonding layer splits the seal. This seal has an extra paper barrier. Backing material remains permanently in the cap.
